CAREER OBJECTIVE

Technically inclined and creatively driven studying at Reva University with a strong foundation in C++ programming, and hands-on hardware development. Experienced in ESP8266 projects, including crypto mining simulations and real-time dashboards with OLED displays. Actively exploring AI and prompt engineering techniques. Seeking opportunities to apply technical and creative skills in real-world, challenging environments.

SKILLS

Technical Skills

- Programming in C++(OOPS)
- Programming in C
- DBMS(SQL)
- Verilog HDL
- MATLAB
- Embedded C
- Prompt Engineering

Tools Used: Xilinx, Cadence, Design Spark, MATLAB, Microsoft Office.

Languages: English, Hindi, Kannada, Telegu.

Certifications:

- Machine Learning with MATLAB *By MathWorks*
- MATLAB Onramp *By MathWorks*
- Ethical Hacking and Cyber Security *(Reva University)*
- PCB Design and Fabrication *(Reva University)*
- ASIC Verification Using System Verilog *By Maven Silicon*

EDUCATION

B. Tech in Electronic and Communication Engineering. **Reva University**
2022 – Present Bengaluru, Karnataka, India CGPA: **8.41**

PUC (Science, PCMC). **Reva PU College**
2020 - 2022 Bengaluru, Karnataka, India Percentage: **94%**

Grade 10 (ICSE), **New Baldwin International Residential School**
2019-2020 Bengaluru, Karnataka, India Percentage**: 94%**

PROJECTS

STUDENT ATTENDANCE SYSTEM USING BLOCKCHAIN TECHNOLOGY

- Engineered a secure, tamper-proof attendance system using blockchain for real-time data capture via RFID and Raspberry Pi, enhancing reliability. Implemented smart contracts with Solidity.
- Developed a full-stack interface using Flask, SQL, HTML5, CSS3, and JavaScript for seamless data interaction and user management.

6G NTN Networks [Research]

- 6G networks promise ultra-high speeds, minimal latency, and seamless integration across platforms, enabling advanced wireless communication.
- Designed to support next-gen applications, 6G will enhance data services and unlock innovations in areas like autonomous systems, smart cities, and immersive technologies

ESP8266 Crypto Mining Simulation with Web Dashboard and OLED Display

- Simulated a crypto mining environment using ESP8266, programmed via Arduino IDE with C++, to mimic real-world mining logic.
- Displayed real-time data on both a web dashboard and OLED screen for live monitoring and visualization.
